1. Introduction & Understanding Your Needs

This proposal outlines our approach to developing your AI-powered customer support platform, designed to automate customer service efficiently. Our solution focuses on building a scalable, multi-tenant system leveraging large language models and modern web technologies.

About Buggy

We specialize in creating scalable, high-performance web applications and integrating advanced AI solutions, perfectly aligning with your need for an LLM-driven, multi-tenant customer support platform. Our expertise ensures seamless integration with technologies like OpenAI APIs and Stripe billing for thousands of businesses.

Challenges We Understand

- Automating customer service efficiently with LLMs across multiple channels.
- Ensuring platform scalability for thousands of businesses with high uptime.
- Implementing a secure multi-tenant architecture with role-based permissions.
- Integrating AI features like semantic search and vector embeddings.
- Managing conversation history and seamless ticket escalation.

Your Goals

Immediate: Develop a foundational multi-tenant platform with core AI-powered chat functionality.

Short-term: Implement multi-channel support, robust analytics, and initial third-party integrations.

Long-term: Ensure continuous scalability, advanced AI feature expansion, and new subscription plan offerings.

2. Project Overview & Scope of Work

We propose developing a comprehensive AI-powered customer support platform featuring intelligent response generation, multi-channel interaction, and robust administration. This solution will automate customer service using LLMs, enhance operational efficiency, and provide deep insights through analytics.

Key Features

- **AI-Powered Live Chat** — Intelligent, automated responses via LLMs from knowledge bases.
- **Multi-Channel Support** — Seamless interaction across live chat, email, and WhatsApp.
- **Multi-Tenant Architecture** — Secure isolation for multiple organizations with distinct data.
- **Document Upload & Search** — Upload knowledge bases with semantic search using embeddings.
- **Ticket Escalation** — Smooth transition of complex queries to human agents.
- **Subscription & Billing** — Manage plans and payments using Stripe integration.

Architecture Approach

The system will utilize a microservices architecture deployed on Kubernetes, providing the necessary scalability, high uptime, and low response latency required for serving thousands of businesses with multi-tenant capabilities.

Recommended Tech Stack

Next.js

React

NestJS

PostgreSQL

OpenAI API

Vector Database

Kubernetes

Stripe

Scope of Work

Phase	Description	Duration
Discovery & Planning	Detailed requirements gathering and architectural design.	3 weeks
Core Backend Development	Building multi-tenant APIs, database, and LLM integrations.	8 weeks
Frontend & Integrations	Developing user interfaces and third-party integrations.	7 weeks
Testing & QA	Comprehensive testing, bug fixing, and performance tuning.	4 weeks
Deployment & Launch	System deployment, go-live, and initial monitoring.	2 weeks

3. Timeline & Budget

Estimated total duration: **22-24 weeks**, targeting completion by **TBD**.

Milestones

Milestone	Target Date
Architecture Design Complete	Week 3
Core Multi-Tenant Backend MVP	Week 11
Frontend & AI Chat UI Ready	Week 18
Full System QA Complete	Week 22
Platform Launch	Week 24

Budget Breakdown

Item	Cost
Discovery & Planning	\$25,000
Backend & AI Development	\$120,000
Frontend & Integrations	\$90,000
QA & Testing	\$40,000
Project Management	\$35,000
Infrastructure & Deployment	\$20,000
Total Estimated Cost	\$330,000 - \$450,000

4. Team & Why Choose Us

Alice Johnson

Project Manager

Bob Smith

AI Engineer

Charlie Brown

Backend Developer

Diana Prince

Frontend Developer

Eve Adams

QA Engineer

The chosen stack and microservices architecture are critical for achieving the high scalability, multi-tenancy, and performance demanded by an enterprise AI customer support platform. Our team's expertise in AI and robust backend development ensures a successful implementation.

5. Next Steps

Please review this proposal and reach out with any questions. Upon your approval and a deposit, we can schedule a kickoff meeting to commence the project.
