7/16/2026

1. Introduction & Understanding Your Needs

This proposal outlines a comprehensive plan to develop a modern web application for your restaurant, enabling customers to easily browse menus, make reservations, and place online food orders. Our solution aims to enhance your operational efficiency and customer engagement.

About Buggy

Based on your requirements for a modern restaurant website, we propose a tailored web application that addresses your need for streamlined menu display, reservation management, and online food ordering. Our expertise in building scalable web solutions will ensure a robust platform for your culinary business.

Challenges We Understand

- Inefficient menu display and updates
- Manual reservation management
- Lack of online food ordering capabilities
- Cumbersome order tracking
- Outdated customer experience

Your Goals

Immediate: Launch a user-friendly website allowing customers to view menus, make reservations, and place online food orders.

Short-term: Streamline restaurant operations through efficient order and reservation management via the admin panel.

Long-term: Enhance customer loyalty, gather data for business insights, and establish a strong online presence for the restaurant.

2. Project Overview & Scope of Work

We propose developing a responsive web application and an intuitive admin panel. The customer-facing site will offer menu viewing, reservation booking, and online ordering, while the admin panel will manage orders, update menu items, and oversee reservations.

Key Features

- **Online Menu Display** — Interactive and categorized menu with item details and prices.
- **Table Reservation System** — Customers can book tables, view availability, and receive confirmations.
- **Online Food Ordering** — Seamless process for customers to select items and place orders.
- **Order Management Admin** — Track, accept/reject, update status of customer orders.
- **Menu Management Admin** — Easily add, edit, or remove menu items and categories.

Architecture Approach

We recommend a modular monolith architecture. This approach is highly efficient for your specified budget tier of \$10k-\$25k, allowing for rapid development and deployment of core functionalities without the overhead complexities and costs associated with distributed systems like microservices, while still providing clear separation for future growth.

Recommended Tech Stack

[React](#)[Node.js](#)[Express.js](#)[MongoDB](#)[Socket.IO](#)[React Router](#)

Scope of Work

Phase	Description	Duration
Discovery & Planning	Requirements gathering, technical design, project roadmap.	1 week
UI/UX Design	Wireframing, prototyping, user interface mockups, user experience flows.	2 weeks
Frontend Development	Building responsive customer and admin interfaces with React.	3 weeks
Backend Development	Developing REST API and integrating MongoDB database.	3 weeks
QA & Deployment	Testing, bug fixing, performance optimization, launch preparation.	1 week

3. Timeline & Budget

Estimated total duration: **10 weeks**, targeting completion by **1 - 3 months**.

Milestones

Milestone	Target Date
Project Kick-off & Discovery Complete	Week 1
UI/UX Design Approval	Week 3
Customer-Facing Frontend Complete	Week 6
Backend API & Admin Panel Complete	Week 9
Full System Deployment & Launch	Week 10

Budget Breakdown

Item	Cost
Discovery & Planning	\$2,000
UI/UX Design	\$4,000
Frontend Development	\$6,000
Backend Development	\$6,000
QA & Testing	\$3,000
Project Management	\$2,500
Contingency Buffer	\$1,500
Total Estimated Cost	\$10,000 - \$25,000

4. Project Team & Delivery Approach

Based on the project scope and complexity, we recommend the following team composition to ensure timely delivery, high quality, and long-term maintainability.

1 × Solution Architect

• System architecture • Technology decisions

1 × UI/UX Designer

• User flows • Wireframes • UI mockups

1 × Full-Stack Developer

• Frontend implementation • Backend API development • Database integration

1 × QA Engineer

• Test planning • Functional testing • Bug reporting

1 × Project Manager

• Scope management • Schedule tracking • Client communication

Why This Team Structure?

- Dedicated cross-functional team
- Agile and iterative development cycles
- Transparent communication and progress updates
- Focus on user experience and business goals
- Cost-effective, high-quality delivery

Delivery Philosophy

Our delivery approach involves assembling a lean, dedicated team according to the technical requirements, utilizing agile methodologies to ensure iterative development, continuous feedback, and rapid delivery of functional increments.

5. Next Steps

Please review this proposal at your convenience. We are available to discuss any questions, finalize the scope, and proceed with a deposit to initiate the project kickoff.
